

Permanent Eyeliner Services

Permanent Eyeliner is a cosmetic tattoo, which allows your top lashes to have a more full and darker effect by simply outlining and framing the eye. The goal at the end of this process is to allow the permanent eyeliner to sit directly on the top lash line, blending into the top lashes. The Permanent Eyeliner Services give room for advantages such as: no smudging, will always have its beautifully draw shape, and it cuts down on daily makeup routines.

How to Prepare for Your Appointment

- Do not take any blood thinning medication 72 hour prior to the appointment time. These medications include: Vitamin E , Aspirin, Niacin, fish oil, Advil, and Ibuprofen. If medication is needed for pain at all during those 72 hours prior to appointment time, it is fine to take Tylenol.
- If you wear contacts daily, they will need to be removed when it is time for the procedure, and they cannot be worn again for 2-3 weeks after your tattoo.
- If you have eyelash extensions, they should be removed before coming in for your appointment. Eyelash extensions effect the tattooing process and the healing process.
- If you use any serums for lash growth, you should stop within 2 weeks before your scheduled appointment, and you must not use it again until 30 post appointment.
- NO exercises the day of your appointment or for 7-10 days after.
- NO alcoholic beverages 24-48 hours prior to scheduled appointment time.

Eyeliner Aftercare

- If there is swelling, ice for 15 minutes every hour after your treatment for a 4-hour time span.
- DO NOT put makeup on the area that was tattooed for 2 weeks. Cosmetics can interfere with how the area tattooed heals along with the color.
- No swimming, Jacuzzis, hot tubs, or any large body of water for 2 weeks after the procedure.
- Avoid applying anti-acne products or lightening creams while the treated area goes through healing.
- Once the tattooed area is healed, it is important and recommended that you throw away your old mascara and buy a new tube.

What do I need to Expect After my Appointment?

- During the healing stages, there should be some flaking of the skin in that specific area. If peeling/flaking does appear, please do not touch, pull, or rub those places. It is important to let those places flake on their own as it could cause the skin and color to heal incorrectly. (This could take up to 2 weeks)
- The overall healing period can last up to 6 weeks. When those six weeks are up, the color should now be healed to its true color targeted for.
- If a few weeks have gone by, and you feel that you have lost a lot of your color, do not worry because your skin must go through the complete healing period before your get that final and desired color.
- ALWAYS book your follow up appointment between 6-8 weeks!

If You have Any of These, it is Not Recommended for you to Acquire Permanent Makeup

- Glaucoma and anyone who is taking blood thinning medications.
- Chemotherapy (talk to your doctor first)
- Diabetes (talk to your doctor first)
- Keloid Disorder
- Any kind of viral infections or diseases
- Pacemaker or any kind of heart threatening problems.
- Organ Transplant
- Epilepsy
- Skin irritations or eczema near the treated area (rashes, sunburn, acne)
- If you've had Botox within the past 4 weeks before your appointment.
- If you are pregnant or nursing
- If you have allergies, and are allergic to makeup, colors, or hair dye
- Those with easily triggered post inflammatory hyper pigmentation
- Transmittable blood conditions (HPV or Hepatitis)
- Hemophiliac
- Healing problems, uncontrolled high blood pressure, or mitral valve disorder
- Those using any skin medication that causes thinning and irritation of the skin.
- AHA's or any OTC creams and lotions that are used to tone correct, anti-aging, and exfoliate. These things could cause fading and discoloration in your permanent makeup tattoo.
- Coumadin: depending on the amount of bleeding and how your skin responds to topical epinephrine, will determine how much coverage the tattoo will be able to cover per session. If one tends to bleed during the procedure, they may have to come for a few extra appointments to make sure the color is taking.
- If one has had an eyelift or blepharoplasty, it is important to wait 3 months before scheduling to come in for eyeliner.
- If one has Pinkeye and wants to make an appointment, they must wait until they are completely healed and taken all of their prescribed medication before scheduling an appointment.
